

Rules & Purpose Lab

Deterministic testing
and AI evaluation

A practical teaching lab
Brad Guider

Contracts and purpose

A trustworthy release process needs evidence for both.

Deterministic contracts	Purpose evaluation
Did the response obey the explicit rules?	Did the response address the customer’s need?
Valid JSON, required fields, allowed action, existing policy IDs	Relevant advice, supported claims, a feasible next step

Code, models, and people can contribute evaluation evidence.

One customer, four outcomes

“My unused lamp arrived 10 days ago. How do I return it?”

Candidate	Contract	Purpose	Decision
Valid JSON with irrelevant catalog advice	Pass	Fail	Block
Helpful return advice in plain text	Fail	Pass	Block
Plain text claiming a completed refund	Fail	Fail	Block
Valid JSON with supported return advice	Pass	Pass	Eligible

Authored teaching fixtures. Eligible applies to the evaluated scenario.

Evidence can become stale

An original answer

“Please provide your order number so support can help start a return request.”

An added claim

“Your refund has already been processed.”

Old quotations still match. The evaluated input has changed.

REVIEW: reassessment must address the exact current inputs.

The release decision

Decision	Evidence required
Block	Known contract failure, or valid uncontested purpose failure
Review	Missing or stale evidence, invalid grading, or a material disagreement
Eligible	All required evidence is valid and every criterion is satisfied

A high average cannot cancel a failing requirement.

The hands-on workshop

01

Predict

Which responses should be eligible?

02

Inspect

Trace a decision to its checks and excerpts.

03

Repair and reassess

Change an exercise copy while preserving the baseline.

04

Challenge the judge

Explain why confident grading may be wrong.

The teaching trial

The next evidence comes from learners.

Can they complete the exercise and explain why a passing contract can still lead to a blocked release?

No API key needed for the workshop
